16. Settings / Paramètres	25

REFERENCE

17. Roles & Access Matrix	27
18. Status Definitions	28
19. Tips & Best Practices	29

1. Logging In & Authentication

Secure access to your tenant workspace

How to log in

1 Open the application

Navigate to the ERP URL provided by your administrator (e.g., `http://localhost` or your hosted domain).

2 Enter your credentials

Type your **email address** and **password** then click `Sign In`.

3 You're in

You land on the Dashboard. Your name and role appear in the top-right corner. A JWT access token is silently refreshed every session.

Forgotten password? Contact your Super Admin or Admin. They can reset your account from the Users page.

Session security: Tokens expire automatically. If you are idle for an extended period you will be redirected to the login screen — simply sign in again.

2. Dashboard Overview

Real-time KPIs and business health at a glance

The Dashboard is the first screen after login. It provides a live summary of key metrics across the entire platform.

Metric Cards

CARD	WHAT IT SHOWS
Total Customers	Number of customer records in the system
Total Products	Active SKUs in your product catalogue
Sales This Month	Count of sales orders created this calendar month
Revenue This Month	Total value of confirmed/paid sales this month
Pending Purchases	Purchase orders awaiting receipt or approval
Open Leads	CRM leads not yet converted or lost
Open Opportunities	Sales pipeline items with status OPEN
Low Stock Count	Products below their minimum stock threshold
Active Budgets	Budget plans in APPROVED status
Unread Notifications	System alerts (low stock, approvals, etc.)

Tip: Click any metric card where available to navigate directly to the relevant module (e.g., clicking Low Stock takes you to Inventory).

3. Navigation & Common UI Patterns

How to use the sidebar, tables, modals, and pagination

Sidebar navigation

The left sidebar groups all modules. Collapsed on small screens (hamburger menu). Your current page is highlighted in indigo.

Search bars

Every list page has a search field at the top-left. Type to filter results instantly — results refresh as you type (no need to press Enter).

Pagination

Long lists are paginated (default 20 rows). Use the  /  buttons at the bottom of the table to navigate between pages.

Modals (pop-up forms)

Creating or editing records opens a modal overlay. Required fields are marked with *. Press  or click outside the modal to close without saving.

Status badges

Coloured pills indicate record status throughout the app:

ACTIVE / PAID / APPROVED

PENDING / DRAFT / PENDING_APPROVAL

INACTIVE / OVERDUE / LOST

CONFIRMED / CONVERTED

NEW / OPEN

CANCELLED / CLOSED

Buttons

STYLE	MEANING
Indigo (solid)	Primary action — create, save, confirm
Outline	Secondary — cancel, edit, navigate
Red / Danger	Destructive — delete (always confirm first)
Orange	Disable / toggle off
Sky Blue	Clone / copy action
Green	Enable / approve

4. POS — Point of Sale / Caisse

Fast cashier interface for walk-in and counter sales

All roles with sales:CREATE

The POS screen is split into two panels: the **Product Grid** on the left and the **Cart & Checkout** on the right. It is designed for speed — no page reloads, no navigation.

Screen layout

Left panel — Products

- Session bar: today's sale count & revenue
- Search box to filter products by name or SKU
- Product tiles showing name, SKU, sale price and type badge
- Refresh button (↺) to sync session totals

Right panel — Cart

- Item count badge
- Line items with +/- quantity controls & remove (🗑)
- Subtotal & Total
- Payment method selector
- Amount tendered + automatic change calculation
- Charge button

Making a sale — step by step

1 Search or browse products

Type in the search box or scroll the grid. Each tile shows the product name, SKU, and sale price.

2 Add items to cart

Click any product tile to add it. Click the same tile again to increase the quantity by 1.

3 Adjust quantities

Use the and buttons next to each cart item. Pressing when quantity is 1 removes the item.

4 Select payment method

Choose: **Cash**, **Card**, **Mobile Money**, or **Bank Transfer**.

5 Enter amount tendered (optional for cash)

Type the amount the customer hands you. The change due appears in green automatically.

6 Click "Charge [Total]"

The system creates the sale order, records the payment, and shows the receipt modal.

7 Print or close receipt

Click `Print Receipt` to send to printer, or close the modal. The cart clears automatically.

Walk-in customers: The POS creates sales as "Walk-in" by default. No customer record is required.

Session totals in the top bar refresh automatically after each checkout. Click the ↺ icon to force a refresh.

Payment methods

METHOD	USE CASE
CASH	Physical currency — change is calculated
CARD	Debit/credit card terminal
MOBILE_MONEY	Mobile payment (M-Pesa, Wave, etc.)
BANK_TRANSFER	Direct bank-to-bank

5. Sales / Ventas

Sales orders list, history, and status tracking

Sales Manager

Finance Manager

Admin / Super Admin

The Sales page lists all sales orders across all channels (POS and manual). Each order tracks its customer, date, amounts, and current status.

Columns explained

COLUMN	DESCRIPTION
Reference	Auto-generated unique order number (e.g., <code>SAL-20260610-0001</code>)
Customer	Linked customer name, or "Walk-in" for POS walk-in sales
Date	Sale date
Total	Order total including tax
Paid	Amount already collected
Status	DRAFT · CONFIRMED · DELIVERED · CANCELLED

Sale statuses

DRAFT

CONFIRMED

DELIVERED

CANCELLED

Creating sales manually — The "New Sale" button opens a multi-line order form (planned for Phase 3). For immediate sales, use the POS module which creates a confirmed sale and payment automatically.

Searching: Use the search bar to find sales by reference number or customer name.

6. Customers / Clients

Customer master data — the people you sell to

Sales Manager

All roles with sales:READ

Creating a customer

1

Click "New Customer"

Top-right button on the Customers page.

2

Fill in the form

Required: **Name** and **Code** (unique shortcode, e.g., `CUST-001`). Optional: email, phone, address.

3

Click "Create"

The customer is saved and appears in the table immediately.

Customer fields

FIELD	REQUIRED	NOTES
Name	✓	Full company or individual name
Code	✓	Unique identifier — used in reports and lookups
Email	Optional	Contact email for invoices
Phone	Optional	Primary contact number
Address	Optional	Delivery / billing address

Searching: The search box filters by name or code in real time.

7. Purchases / Achats

Purchase orders — buying from suppliers

Procurement Officer

Finance Manager

Admin / Super Admin

Purchase Orders (POs) track what your organisation buys from suppliers. Each PO has lines for individual products, quantities, and unit costs.

Columns explained

COLUMN	DESCRIPTION
Reference	Auto-generated PO number (e.g., <code>PO-20260610-0001</code>)
Supplier	Linked supplier name
Order Date	Date the PO was created
Total	PO total including tax
Status	DRAFT · CONFIRMED · RECEIVED · CANCELLED

Purchase order statuses

DRAFT

CONFIRMED

RECEIVED

CANCELLED

Receiving inventory: When a PO status moves to RECEIVED, stock levels for the ordered products are automatically updated in the Inventory module.

Before creating a PO make sure the supplier exists in the Suppliers module, and all products exist in the Inventory module.

8. Suppliers / Fournisseurs

Supplier master data — the companies you buy from

Procurement Officer

Finance Manager

Admin / Super Admin

Creating a supplier

1 Click "New Supplier"

Top-right button on the Suppliers page.

2 Fill in the form

Required: **Name** and **Code**. Optional: email, phone, address.

3 Click "Create"

Supplier is saved and available for use in Purchase Orders.

Supplier fields

FIELD	REQUIRED	NOTES
Name	✓	Full company name
Code	✓	Unique shortcode — used in POs and reports
Email	Optional	Contact email for PO correspondence
Phone	Optional	Primary contact number
Address	Optional	Physical address

Active vs Inactive: Inactive suppliers are hidden from PO creation dropdowns. A supplier becomes inactive if you deactivate it via the API or admin tools.

9. Inventory / Inventaire

Product catalogue, stock levels, and movements

Inventory Manager

Procurement Officer

Admin / Super Admin

Creating a product

1 Click "New Product"

Button at top-right of the Inventory page.

2 Enter product details

Fill in the form fields listed below.

3 Click "Create"

Product is added to the catalogue and is immediately searchable in POS.

Product form fields

FIELD	REQUIRED	NOTES
Product Name	✓	Full product name shown everywhere
SKU	✓	Stock-Keeping Unit — must be unique within your tenant. e.g., PROD-001
Sale Price	✓	Price charged to customers. Used in POS and sales lines.
Cost Price	✓	Purchase cost — used for gross profit calculation. Enter 0 if unknown.
Is a Service	Optional	Check this if the product has no physical stock (consulting, labour, etc.). Service items are excluded from stock tracking.

Product columns in the list

COLUMN	DESCRIPTION
Name	Product name
SKU	Unique stock code
Unit Price	Sale price (what customers pay)
Type	Service or Physical
Status	Active or Inactive

Stock movements

Every time inventory changes (purchase received, sale, adjustment, return) a movement record is created automatically. You can also record manual adjustments.

MOVEMENT TYPE	EFFECT ON STOCK	TRIGGERED BY
IN	Increases quantity	Purchase received, manual stock-in
OUT	Decreases quantity	Sale confirmed, manual stock-out
ADJUST	Set to exact quantity	Physical stock count reconciliation
RETURN	Increases quantity	Customer returns

Low stock alerts

When a product's stock level drops below its **Min Stock** threshold, it appears on the Dashboard under "Low Stock Count" and in the Analytics inventory summary. Set `minStock` when creating or editing a product.

SKU uniqueness: Two products cannot share the same SKU within your tenant. The system returns an error on duplicate SKU.

10. Finance

Invoices, payments, and chart of accounts

Finance Manager

Auditor

Admin / Super Admin

The Finance page is split into three sections: Chart of Accounts summary, Invoices table, and Payments table.

Chart of Accounts

Displays the first 8 accounts in your plan comtable. Each card shows the account code, name, and type (ASSET, LIABILITY, EQUITY, REVENUE, EXPENSE).

Account setup: The full chart of accounts is managed by your system administrator or accountant via the API. The Finance page provides a read-only summary view.

Invoices

Invoices are generated automatically when a sale is confirmed. They can also be created manually for services rendered or subscriptions.

COLUMN	DESCRIPTION
Number	Invoice reference (e.g., <code>INV-00001</code>)
Customer	Billed customer
Issue Date	Date invoice was raised
Due Date	Payment deadline (may be blank for immediate payment)
Total	Amount due
Status	DRAFT · ISSUED · PAID · OVERDUE · CANCELLED

Invoice statuses

DRAFT

ISSUED

PAID

OVERDUE

CANCELLED

Payments

Each payment record links to one or more invoices and records the method, amount, and date.

COLUMN	DESCRIPTION
Reference	Payment reference code

COLUMN	DESCRIPTION
Method	CASH · CARD · MOBILE_MONEY · BANK_TRANSFER · CHEQUE
Amount	Amount received
Date	Payment date
Status	PENDING · CONFIRMED · FAILED · REFUNDED

Reconciliation tip: Use the *Customer Aging* report (Reports module) to see all outstanding invoices by age bucket and identify overdue accounts.

11. CRM — Leads & Opportunities

Pipeline management from first contact to closed deal

Sales Manager

All roles with crm:READ

Understanding the lead lifecycle

NEW

→

CONTACTED

→

QUALIFIED

→

CONVERTED

or

LOST

Creating a lead

1 Click "New Lead"

Button at top-right of the CRM page.

2 Fill in contact details

Required: **First Name** and **Last Name**. Optional but recommended: email, phone, company, source.

3 Click "Create Lead"

Lead is added with status **NEW**.

Lead form fields

FIELD	REQUIRED	NOTES
First Name	✓	Contact's first name
Last Name	✓	Contact's last name
Email	Optional	Must be a valid email format if provided
Phone	Optional	Contact phone number
Company	Optional	Company or organisation name
Source	Optional	Where the lead came from (Website, Referral, Trade Show, etc.)

Converting a lead to a customer

1 Find the lead

Use the search bar or scroll the leads table to find the lead you want to convert.

2

Click "Convert"

The orange "Convert" button appears in the Actions column for leads that are not yet CONVERTED or LOST.

3

Conversion complete

The lead status changes to **CONVERTED**. A new Customer record is created automatically with the same name and contact details. The "Convert" button disappears.

After converting: Navigate to the Customers module to find the newly created customer and complete their record (add address, code, etc.).

Lost leads: If a lead does not become a customer, update their status to LOST via the API or admin tools. LOST leads remain in the system for historical reporting.

Searching leads

The search bar filters by lead name or company in real time. Combine with pagination to navigate large lead lists.

12. Budgeting / Budgétisation

Create, submit, and approve annual budget plans

Finance Manager

Department Manager

Admin / Super Admin

Budget plan lifecycle

DRAFT → Submit → **PENDING_APPROVAL** → Approve → **APPROVED**

Creating a budget plan

1 Click "New Budget Plan"

Button at top-right of the Budgeting page.

2 Enter plan details

See field descriptions below.

3 Click "Create Plan"

Plan is saved with status **DRAFT**.

Budget plan fields

FIELD	REQUIRED	NOTES
Plan Name	✓	Descriptive name (e.g., "Operations Budget 2026")
Fiscal Year	✓	4-digit year between 2020 and 2099
Start Date	✓	Budget period start
End Date	✓	Budget period end (must be after start date)
Total Budget Amount	✓	Total planned spend in your base currency
Notes	Optional	Free-text comments or justification

Submitting for approval

1 Find the DRAFT plan

Locate the budget plan in the table. Its status will be **DRAFT**.

2 Click "Submit"

The **Submit** button (clock icon) appears in the Actions column for DRAFT plans. Status changes to **PENDING_APPROVAL**.

Approving a budget plan

Finance Manager

Admin / Super Admin

1 Find the PENDING_APPROVAL plan

Plans awaiting approval show the **Approve** button (checkmark icon) in the Actions column.

2 Click "Approve"

Status changes to **APPROVED**. The plan is now locked and active. The Dashboard "Active Budgets" count increments.

Only Finance Managers and Admins can approve budget plans. If you submitted a plan and need it approved, notify your Finance Manager.

13. Analytics

Visual KPIs, revenue trends, cash flow, and inventory health

All roles with analytics:READ

The Analytics page provides interactive charts drawn from live data. No date filters are needed — charts are auto-refreshed.

KPI cards (top row)

CARD	WHAT IT SHOWS
Total Sales	Total count of all sales orders ever recorded
Total Revenue	Cumulative revenue across all confirmed sales
Outstanding	Total unpaid balance on issued invoices

Revenue by Period chart

An area chart showing revenue aggregated by month. Hover any data point to see the exact figure. Use this to identify seasonal trends and peak sales periods.

Cash Flow Forecast chart

A grouped bar chart comparing projected **inflow** (green) vs **outflow** (amber) by period. Helps identify periods where cash may be tight before they arrive.

Inventory Summary

Shows total product count and a list of items currently below their minimum stock threshold (red). Acts as a quick-action list — go to Inventory to reorder or adjust.

Drilling down: Analytics is a read-only summary. For detailed date-range analysis, use the Reports module.

14. Reports / Rappports

Generate on-demand financial and operational reports

Finance Manager

Auditor

Sales Manager

Admin / Super Admin

Running a report

1

Select report type

Choose from the "Report Type" dropdown (see types below).

2

Set the date range

Enter **Start Date** and **End Date**. The default range is the past 12 months.

3

Choose grouping (period reports)

For Sales by Period and Purchases by Period, select **By Month**, **By Week**, or **By Day**.

4

Click "Run Report"

Results appear below the controls. The report automatically recalculates when you change parameters and click Run again.

Available report types

REPORT TYPE	WHAT IT SHOWS	GROUP BY
Sales by Period	Sales count, revenue, collected amount, and confirmed count per time period. Totals row at top.	Month / Week / Day
Inventory Valuation	Every SKU per warehouse with quantity, cost value, and sale value. Total items, total cost value, total sale value.	—
Customer Aging	Outstanding invoices grouped by how overdue they are (0–30, 31–60, 61–90, 91–120, 120+ days). Total outstanding balance.	—
Purchases by Period	Purchase order count, total value, and received count per time period.	Month / Week / Day
Profit & Loss	Gross revenue, tax collected, discounts, net revenue, cost of goods sold, gross profit, and gross margin % for the period.	—

Report columns — Sales by Period

COLUMN	MEANING
Period	Month/week/day bucket
Sales	Total sales orders created in this period
Revenue	Sum of total order values
Collected	Sum of paid amounts
Confirmed	Count of confirmed orders only

Report columns — Customer Aging

COLUMN	MEANING
Customer	Customer name
Invoice	Invoice reference number
Due Date	Payment deadline
Balance	Outstanding amount on this invoice
Status	Current / 1–30 / 31–60 / 61–90 / 90+ days overdue

Exporting: Use your browser's `Ctrl+P` / `Cmd+P` → Save as PDF to export any report to PDF for sharing.

15. Users & Permissions

Manage who has access to the system and what they can do

Super Admin

Admin

HR Manager

User table columns

COLUMN	DESCRIPTION
Name	First and last name
Email	Login email
Roles	Coloured badges showing all assigned roles
Status	ACTIVE · INACTIVE · SUSPENDED
Last Login	Timestamp of most recent login (— if never)
Joined	Account creation date
Permissions	Button to manage direct permission overrides (Admins only)

Creating a new user

1 Click "Add User"

Button appears at top-right for Super Admin, Admin, and HR Manager roles only.

2 Fill in the form

Required: First Name, Last Name, Email (must be unique), Password (min 8 characters).
Optional: Phone, Role assignment.

3 Assign a role

Select from the Role dropdown. Only active roles are shown. A user can have additional roles added later.

4 Click "Create User"

The account is created and the user can log in immediately with their email and password.

Share credentials securely. Ask the user to change their password on first login. Password reset is done by creating a new password through the admin API.

New user form fields

FIELD	REQUIRED	NOTES
First Name	✓	User's first name
Last Name	✓	User's last name
Email	✓	Unique email — used as login credential
Password	✓	Minimum 8 characters. Sent to user to log in first time.
Phone	Optional	Contact number
Role	Optional	Initial role. More roles can be added later via the API.

Managing permission overrides

Beyond role-based permissions, you can grant individual permissions directly to a user. These are *additive* — the user keeps their role permissions plus these extras.

1 Click "Permissions" on the user's row

The shield + arrow button opens the Permission Overrides modal.

2 Review existing overrides

Overrides are grouped by module (e.g., `INVENTORY: CREATE UPDATE`). Remove any with the `×` button.

3 Add a new override

Click `Add Permission Override`, select a permission from the dropdown (e.g., `finance:APPROVE`), and click `Grant`.

When to use overrides: Use them sparingly for exceptions — e.g., a Sales Manager who also needs read access to Finance. Prefer assigning a second role instead when the need is permanent.

16. Settings / Paramètres

Company info, branches, roles, and your profile

The Settings page is divided into four tabs in the left sidebar:

My Profile

- View your name, email, and assigned roles
- See your Tenant ID (for support use)

Company

- Edit company name, email, phone
- Set address, city, country
- Set base currency (e.g., USD, EUR, XOF)
- Set timezone

Branches

- List all business locations
- Add, edit, or delete branches
- Main branch is protected

Roles & Permissions

- View all roles and their permissions
- Create / edit / delete custom roles
- Clone any role
- Enable / disable roles
- Assign permissions via the matrix

Updating company information

1 Go to Settings → Company

Click the "Company" tab in the left sidebar.

2 Edit the form fields

Change any field (name, address, currency, timezone, etc.).

3 Click "Save Changes"

The button activates only when something has changed. A green "Saved!" confirmation appears briefly.

Managing branches

1 Go to Settings → Branches

2 Click "Add Branch"

Fill in Name (required), Code (required), and optional address fields. Click Save.

3 Edit a branch

Click the  button on any branch row. The same form opens pre-filled. Save to update.

4 Delete a branch

Click the red trash icon. The **Main** branch cannot be deleted.

Managing roles & permissions

Super Admin

Admin

Viewing a role's permissions

Click any role in the left list. The right panel shows the permission matrix: rows = modules, columns = actions (READ, CREATE, UPDATE, DELETE, APPROVE). Filled coloured buttons = permission granted.

Creating a custom role

1 Click "New" button

Top-right of the role list (visible to Admins only).

2 Enter name and optional description

Click .

3 Assign permissions

Select the new role in the list. The matrix is empty. Click individual cells or click a module name to toggle all actions for that module. Click .

Cloning a role

Click the [Clone](#) button on any role card. A copy is created with the same permissions as a new custom role named "Original Name (Copy)". Useful for creating role variants.

Enabling / Disabling a role

Click the orange **Disable** or green **Enable** button on a role card. Disabled roles:

- Are shown with a  badge
- Cannot be assigned to new users
- Users already holding the role lose the permissions it granted until it is re-enabled

Editing a role

Click the  (pencil) button to rename the role or update its description. Not available for the Super Admin role.

Deleting a role

Click the red  button. Only **custom (non-system) roles** can be deleted. System roles (Super Admin, Admin, HR Manager, etc.) are protected.

Warning: Deleting a custom role removes it from all users assigned to it. Verify no active users depend on the role before deleting.

Editing system role permissions

System roles (lock icon) can only have their permissions modified by an **Admin** or **Super Admin**. Lower roles see a read-only view with a "Only the Admin can modify system roles" notice.

17. Roles & Access Matrix

Who can do what — quick reference

The system ships with 10 pre-built roles. You can create additional custom roles.

ROLE	TYPE	PRIMARY ACCESS AREAS
Super Admin	System	Full access to everything. Can manage all users, all system roles, all settings. Cannot be disabled or deleted.
Admin	System	Full access. Can manage users, roles, company settings, and branches. Cannot modify the Super Admin role.
HR Manager	System	Users (create, read, update), Settings (read). Cannot delete users or manage roles.
Finance Manager	System	Finance (full), Budgeting (full), Reports (full), Analytics (read), Customers (read).
Procurement Officer	System	Purchases (full), Suppliers (full), Inventory (read), Finance (read).
Sales Manager	System	Sales (full), Customers (full), CRM (full), Analytics (read), Finance (read).
Inventory Manager	System	Inventory (full), Analytics (read), Reports (read).
Department Manager	System	Budgeting (create, read), Analytics (read), relevant operational modules (read).
Employee	System	Read-only access to modules relevant to their function. Cannot create or modify records.
Auditor	System	Read-only access to Finance, Sales, Purchases, Inventory, and Reports. No create/edit/delete.
Custom roles	Custom	Permissions are fully configurable by an Admin via the Roles & Permissions matrix in Settings.

Permission actions

ACTION	MEANING
READ	View lists and detail records
CREATE	Add new records
UPDATE	Edit existing records
DELETE	Remove records permanently

ACTION	MEANING
APPROVE	Change status to approved (budgets, purchases, invoices)

18. Status Definitions

Meaning of every status badge in the system

Sales orders

STATUS	MEANING
DRAFT	Order created but not yet confirmed. Can be edited or deleted.
CONFIRMED	Order approved and stock reserved. Payment may or may not be collected.
DELIVERED	Goods or services delivered to the customer. Order complete.
CANCELLED	Order cancelled. Stock is released back.

Purchase orders

STATUS	MEANING
DRAFT	PO being prepared. Not yet sent to supplier.
CONFIRMED	PO sent/approved. Awaiting delivery.
RECEIVED	Goods received. Inventory updated.
CANCELLED	PO cancelled.

Invoices

STATUS	MEANING
DRAFT	Invoice created but not yet sent to customer.
ISSUED	Invoice sent to customer. Payment expected.
PAID	Full payment received.
OVERDUE	Past due date with outstanding balance.
CANCELLED	Invoice voided.

Budget plans

STATUS	MEANING
DRAFT	Being prepared. Can be edited.
PENDING_APPROVAL	Submitted. Awaiting Finance Manager or Admin approval.

STATUS	MEANING
APPROVED	Active. Counts in Dashboard and Analytics.
REJECTED	Returned. Edit and resubmit.

CRM leads

STATUS	MEANING
NEW	Lead just entered the system. Not yet contacted.
CONTACTED	First contact made.
QUALIFIED	Lead confirmed as a genuine prospect.
CONVERTED	Lead became a customer. Customer record created automatically.
LOST	Lead did not convert. Kept for historical records.

Users

STATUS	MEANING
ACTIVE	User can log in normally.
INACTIVE	Account deactivated. User cannot log in.
SUSPENDED	Account temporarily blocked by an administrator.

19. Tips & Best Practices

Getting the most out of the ERP platform

Daily operations checklist

1

Check the Dashboard first

Review the Low Stock count and Outstanding balance before starting your day.

2

Process POS transactions in real time

Do not batch POS entries — enter each sale as it happens for accurate session totals and live inventory.

3

Confirm purchase orders promptly

Move POs from DRAFT to CONFIRMED once sent to the supplier, and to RECEIVED when goods arrive to trigger inventory updates.

4

Review customer aging weekly

Run the Customer Aging report every week to follow up on OVERDUE invoices before they become bad debt.

5

Approve budget plans before the fiscal period starts

Plans must be APPROVED to show in the Dashboard active count and to be used for variance analysis.

Data hygiene tips

Unique codes matter. Customer codes, supplier codes, and product SKUs must be unique. Develop a consistent naming convention from the start (e.g., `CUST-001`, `SUPP-001`, `PRD-001`).

Set min stock thresholds. Enter a `minStock` value for every physical product. This powers the Low Stock alert on the Dashboard and Analytics page.

Keep roles lean. Prefer assigning one well-defined role per user. Use direct permission overrides only for genuine exceptions, not as a way to avoid creating a proper role.

Deactivate, don't delete. When an employee leaves, disable their user account (change status to INACTIVE) rather than deleting it. Historical records linked to that user (sales, approvals) remain intact.

Currency consistency. Set your base currency in Settings → Company before entering any financial records. Changing it later does not retroactively convert stored amounts.

Role assignment recommendations

JOB FUNCTION	RECOMMENDED ROLE(S)
Cashier / Teller	Employee + custom "Cashier" role with <code>sales:CREATE</code>
Warehouse staff	Inventory Manager
Purchasing agent	Procurement Officer
Accountant	Finance Manager
Sales rep	Sales Manager
External auditor	Auditor
Department head	Department Manager
IT / System admin	Admin
CEO / Owner	Super Admin

Keyboard shortcuts

SHORTCUT	ACTION
<code>Ctrl+P</code> / <code>Cmd+P</code>	Print current page / export as PDF
<code>Escape</code>	Close open modal without saving
<code>Tab</code>	Move between form fields
<code>Enter</code>	Submit focused form (when cursor is in a text field)

Getting help

For technical issues, provide your **Tenant ID** (visible in Settings → My Profile) and a description of the error to your system administrator.
